## SUMMARY

Computer Science undergraduate with a core interest in **Software Development** and its intersection with Machine Learning. Experienced in building scalable web applications and real-world systems, including ride-sharing platforms and AI-driven monitoring tools. Skilled in backend development, API design, and database management with a focus on practical problem-solving.

## EDUCATION

|                                                                                                            |                                       |
|------------------------------------------------------------------------------------------------------------|---------------------------------------|
| <b>Bangalore Institute of Technology</b><br><i>Bachelor of Engineering in Computer Science (CGPA: 9.1)</i> | Expected May 2027<br>Bangalore, India |
| <b>Amarajyothi PU College</b><br><i>Higher Secondary Education (Percentage: 96.3%)</i>                     | Aug 2023<br>Bangalore, India          |

## TECHNICAL SKILLS

**Languages:** Python, C++, Java, JavaScript, SQL, HTML/CSS  
**Frameworks:** React.js, Node.js, FastAPI, Express, MongoDB  
**Tools:** Git, GitHub, VS Code, Vercel, Render, Postman  
**Core Concepts:** Data Structures (DSA), OOPs, Operating Systems, DBMS, Machine Learning

## PROJECTS

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |          |

| <ul style="list-style-type: none"><li>Engineered a full-stack platform with secure authentication and role-based access control for corporate environments.</li><li>Developed a <b>distance-based matching algorithm</b> to optimize passenger-driver routing and reduce commute overhead.</li><li>Built scalable REST APIs for dynamic seat allocation and ride booking, ensuring data consistency with MongoDB.</li></ul>                                                                                                                                                                                                                                                                |          |

## ACHIEVEMENTS & LEADERSHIP

**Secretary, Oscore Technical Club:** Led the initiative to organize **Ideathon** and **Hackathons** for students. Coordinated event and team efforts.

**MIT Hackathon Participation:** Selected to participate in the MIT Hackbricks Hackathon, collaborating with a team to build AI-driven solutions.

**I-Solve Hackathon Finalist:** Led a team to the Top 10 out of 80+ entries for a prototype focused on smart traffic optimization.

**Regional Hackathons:** Participant at the **CICADA Hackathon** (Atria Institute of Technology) and **Gradient Hackathon** (BMSCE).
